

## Situace s informačním zákresem bodů nad mapou

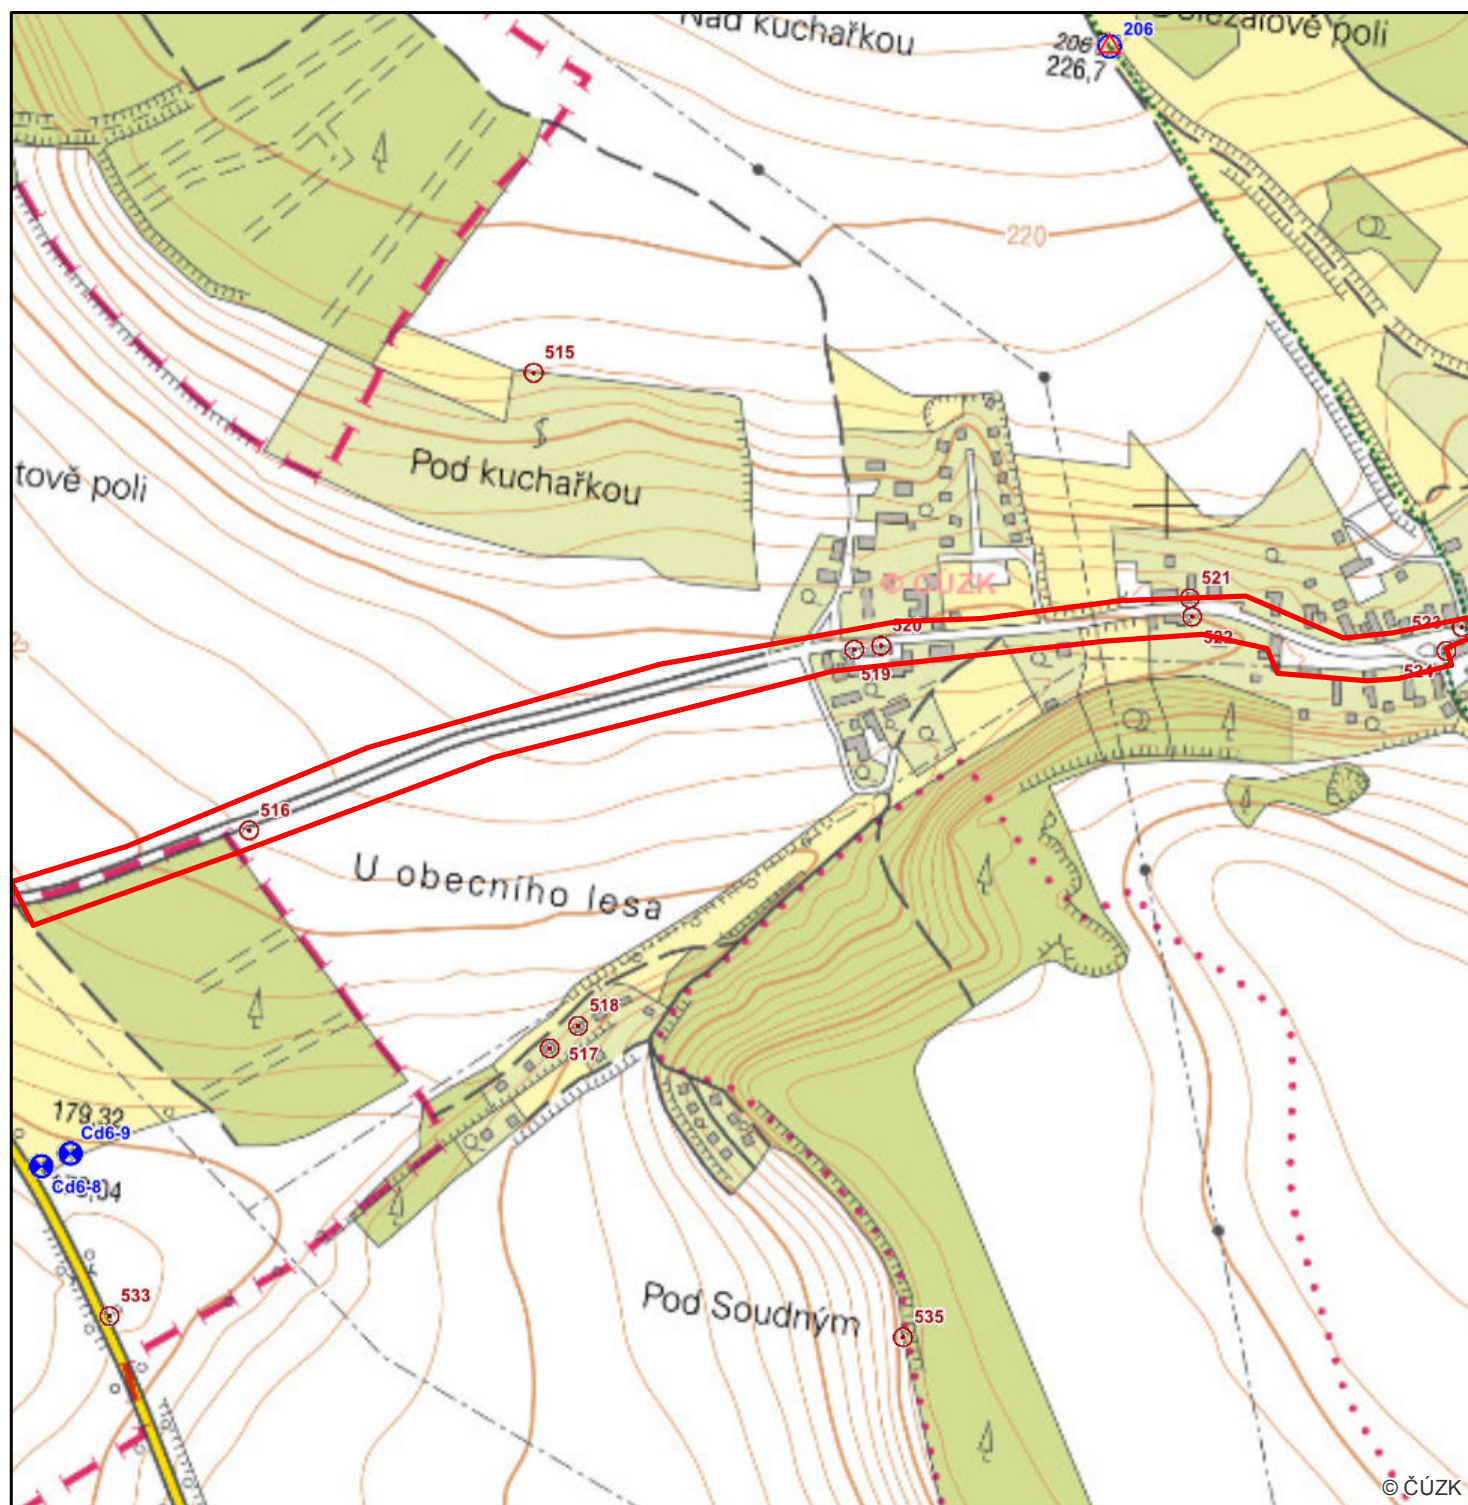

Figure 1 is a line graph showing the change in the number of individuals of the 1st and 2nd instars of the European spruce sawfly (*P. abietis*) over a 360-day period. The x-axis represents time in days (0 to 360), and the y-axis represents the number of individuals (0 to 100). The 1st instar population (solid line) starts at 0, peaks at approximately 80 around day 120, and then declines to about 20 by day 360. The 2nd instar population (dashed line) starts at 0, peaks at approximately 60 around day 180, and then declines to about 10 by day 360.
